

Celsion Receives \$11.1 Million Allocation Through the New Jersey Technology Business Tax Certificate Transfer (NOL) Program

December 3, 2018

Non-Dilutive Funding Strengthens Balance Sheet

Proceeds Equate to More Than \$0.55 Per Share

LAWRENCEVILLE, N.J., Dec. 03, 2018 (GLOBE NEWSWIRE) -- [Celsion Corporation](#) (NASDAQ: CLSN), an oncology drug development company, today announced it has received approval from the New Jersey Economic Development Authority's (NJEDA) Technology Business Tax Certificate Transfer (NOL) program to sell \$11.1 million of its unused New Jersey net operating losses (NOLs) for the tax years 2011 through 2017. The NOLs are typically sold at a small, single-digit discount to qualified companies with operations in New Jersey. As a result, the Company anticipates it will be able to transfer this credit and receive approximately \$10.5 million of net cash proceeds prior to the end of 2018. With this additional funding, the Company expects to report approximately \$28.5 million in cash and investments at year-end 2018.

This competitive program, administered by the NJEDA, enables approved companies to sell their unused New Jersey net operating losses and R&D tax credits to unaffiliated, profit-generating corporate taxpayers in the state of New Jersey, up to a maximum lifetime benefit of \$15 million per company. This allows technology and biotechnology companies with NOLs to turn their tax losses and credits into cash proceeds to fund more R&D, expand its workforce, or cover other allowable expenditures. Celsion was the largest recipient out of 48 qualifying biotechnology/technology companies to share in more than \$60 million in funding this year.

"The NJEDA's NOL program, an innovative funding mechanism for companies like Celsion, reinforces our belief in the State of New Jersey's commitment to biotechnology research. We plan to participate in it again in 2019 to secure an additional \$2 million to \$3 million available to us under the program," said Michael H. Tardugno, Celsion Corporation's chairman, president and chief executive officer. "The proceeds from the NOL sale appreciably augment our cash position, and together with the four-year, \$10 million venture debt agreement with Horizon Technology Finance Corporation put in place in June on very favorable, investor friendly terms, successfully extends Celsion's operating runway into the fourth quarter of 2020. With this new, non-dilutive funding, we are positioned to continue to advance our development programs well beyond several expected key value inflection points for the company, including the two interim efficacy read-outs of the Phase III OPTIMA Study for ThermoDox® and full patient enrollment of the Phase I/II OVATION 2 Study for GEN-1. We appreciate the support and commitment of the NJEDA in facilitating our continued innovation and applaud their efforts to foster continued investment and growth for businesses in New Jersey."

As of November 30, 2018, the Company had 18.7 million shares outstanding and 1.6 million warrants outstanding, of which 1.2 million of these outstanding warrants have an exercise price over \$6.00 per share and will expire in early April 2019.

"Throughout the course of 2018, Celsion has sought innovative ways to finance our clinical development programs in some of the world's most devastating cancers. Balancing the high cost of research and drug development without losing focus on our shareholders is not only reflected in our successful application to sell our New Jersey NOL's, it is further demonstrated in our judicious use of venture debt on terms that give us an operating runway into the second half of 2020," said Jeffrey W. Church, Celsion Corporation's Executive Vice President and CFO. "With the support of our shareholders, we look forward to an exciting and promising year ahead."

About Celsion Corporation

Celsion is a fully-integrated oncology company focused on developing a portfolio of innovative cancer treatments, including directed chemotherapies, immunotherapies and RNA- or DNA-based therapies. The Company's lead program is ThermoDox®, a proprietary heat-activated liposomal encapsulation of doxorubicin, currently in Phase III development for the treatment of primary liver cancer. The pipeline also includes GEN-1, a DNA-based immunotherapy for the localized treatment of ovarian and brain cancers. Celsion has two platform technologies for the development of novel nucleic acid-based immunotherapies and other anti-cancer DNA or RNA therapies.
