## **Celsion Reports Third Quarter 2011 Financial Results and Provides Business Updates**

### **Company to Hold Conference Call Thursday, November 10th at 11:00 a.m. ET**

LAWRENCEVILLE, NJ -- (MARKET WIRE) -- 11/10/11 -- Celsion Corporation (NASDAQ: CLSN), a leading oncology drug development company, today announced financial results for the third quarter ended September 30, 2011, and provided a business update including development progress with ThermoDox®, Celsion's proprietary heat-activated liposomal encapsulation of doxorubicin currently under evaluation in a pivotal Phase III study, the HEAT Study, in patients with non-resectable primary liver cancer (hepatocellular carcinoma or "HCC"). The Company recently announced that the HEAT Study, which is being conducted under a U.S. Food and Drug Administration (FDA) Special Protocol Assessment, has received FDA Fast Track Designation and has been designated as a Priority Trial for liver cancer by the National Institutes of Health, has reached its enrollment target of 600 patients.

"The third quarter was a pivotal period in our evolution as a biopharmaceutical company, having reached the enrollment objective in our Phase III HEAT Study," said Michael H. Tardugno, Celsion's President and Chief Executive Officer. "Celsion has taken great care over the past several years to conduct this study to the highest standards of clinical, statistical and regulatory rigor, in an effort to ensure a successful review process in a multitude of territories around the world, following a positive study outcome. These efforts are particularly significant as we approach the preplanned interim analysis, which is scheduled for the current quarter. The Company remains well funded to execute this study to final data readout, which we continue to anticipate in late 2012."

#### *Recent Business Developments*

- | In August, Celsion announced that it had reached its target enrollment of 600 patients in the Company's pivotal, Phase III HEAT Study, a multinational, randomized, double-blind, placebo-controlled clinical study of ThermoDox® in combination with radio frequency ablation (RFA) for the treatment of primary liver cancer. The target enrollment figure is designed to ensure that the study's primary end point, progression-free survival, can be achieved with statistical significance, and is one of two triggers for an interim efficacy analysis by the study's independent Data Monitoring Committee, the second being a minimum of 190 progression-free survival events realized in the study population. The HEAT Study is being conducted under a FDA Special Protocol Assessment, has received FDA Fast Track Designation and has been designated as a Priority Trial for liver cancer by the National Institutes of Health;
- | During the third quarter ended September 30, 2011, the Company strengthened its balance sheet through the completion of the following two equity financing transactions:
  - | In July, a registered direct offering of \$6.6 million in common stock and warrants.
  - | In July, sales of an aggregate \$18.4 million of the Company's securities, of which \$13.0 million was from institutional investors in a registered direct offering and an additional \$5.4 million was from other investors in a private placement.

#### *Financial Results*

For the third quarter ended September 30, 2011, Celsion reported a net loss of \$6.4 million, or \$0.25 per share, compared to a net loss of \$4.7 million, or \$0.38 per share, in the same period of 2010. For the first nine months of 2011, net cash used in operations was \$18.3 million. Celsion reported a net loss of \$17.1 million for the first nine months of 2011, compared to a net loss of \$13.5 million for the same period of 2010. In the third quarter of 2011, Celsion recorded a \$375,000 non-cash benefit related to the change in the common stock warrant liability compared to \$453,000 in the same period of last year. In the first nine months of 2011, Celsion recorded a \$42,000 non-cash charge related to the change in the common stock warrant liability compared to a non-cash benefit of \$712,000 in the same period last year.

Research and development costs, as expected, were \$1.5 million higher in the third quarter of 2011 compared to the prior year, primarily due to increased costs for investigator grants, monitoring costs and milestone payments associated with higher patient enrollment levels for the Company's Phase III HEAT Study. Also contributing to this increase were activities associated with development expenses related to commercial manufacturing for ThermoDox®. General and administrative expenses were \$189,000 higher in the quarter ended September 30, 2011 compared to the prior year as a result of increased professional services and personnel costs to support the Company's growth.

For the third quarter ended September 30, 2011, net cash used in operations was \$6.9 million. The Company ended the quarter with \$21.4 million of cash and investments. This figure included gross proceeds of \$19.6 million from two registered direct financings, \$5.4 million from a private placement financing and \$0.4 million from common stock warrant exercises completed during the third quarter of 2011.

#### *Other Business Highlights*

- | In August, Celsion convened a clinical symposium in Hong Kong to discuss the reach and market potential of ThermoDox® in the Asia Pacific region. In attendance at the symposium were 35 clinical investigators participating in the Phase III HEAT Study. The Asia Pacific region has the world's highest incidence of HCC, due primarily to the endemic status of chronic hepatitis B and C viruses, which lead to liver cirrhosis and an increased risk of liver cancer. With a growing incidence, it is projected that HCC will surpass lung cancer as the largest global cancer indication within the next decade;
- | In August, Celsion announced the publication of a clinical and scientific review of ThermoDox® in the August 2011 issue of *Future Oncology* (Volume 7, Number 8). The article, titled "Lyso-Thermosensitive Liposomal Doxorubicin: An Adjuvant to Increase the Cure Rate of Radiofrequency Ablation (RFA) in Liver Cancer," provides an overview of current standard and investigational approaches to the treatment of HCC, focusing on the curative and synergistic potential of combining lyso-thermosensitive liposomal doxorubicin (LTLD or "ThermoDox®") and RFA as front-line therapy;
- | In August, Celsion appointed Gary Renshaw, D.O., as Executive Medical Director. Dr. Renshaw possesses an extensive record of successful drug development in oncology, with industry experience in various clinical and regulatory positions at DelCath Systems, Celgene Corporation, Johnson & Johnson PRD, Eisai Co., and Eli Lilly and Company; and
- | In late October, the Company moved into its new corporate headquarters at 997 Lenox Drive, Suite 100, Lawrenceville, New Jersey 08648, under attractive lease terms. The Company received a New Jersey Economic Development Authority Business Employment Incentive Program (BEIP) grant, approved in August, to support the move. The grant provides for up to \$1.12 million in tax incentives for jobs created in, or relocated to the State. The Company's new telephone number is (609) 896-9100.

#### *Quarterly Conference Call*

The Company is hosting a conference call to provide a business update and discuss the third quarter 2011 results at 11:00 a.m. Eastern Time Thursday, November 10, 2011. To participate in the call, interested parties may dial 1-888-427-9380 (Toll-Free/North America) or 1-719-785-1749 (International/Toll) and use Conference ID: 3247371 to register ten minutes before the call is scheduled to begin. The call will also be broadcast live on the internet at <http://www.celsion.com>.

The call will be archived for replay on November 10, 2011 at 2:00 p.m. Eastern Time and will remain available until November 17, 2011. The replay can be accessed at 1-877-870-5176 (Toll-Free/North America) or 1-858-384-5517 (International/Toll) using Conference ID: 3247371. An audio replay of the call will also be available on the Company's website, <http://www.celsion.com>, for 30 days after 2:00 p.m. Eastern Time Thursday, November 10, 2011.

#### *About Primary Liver Cancer*

Primary liver cancer is one of the most deadly forms of cancer and ranks as the fifth most common solid tumor cancer. The incidence of primary liver cancer is approximately 20,000 cases per year in the United States, approximately 40,000 cases per year in Europe and is rapidly growing worldwide at approximately 700,000 cases per year, due to the high prevalence of Hepatitis B and C in developing countries. The standard first-line treatment for liver cancer is surgical resection of the tumor; however, 90% of patients are ineligible for surgery. Radio frequency ablation (RFA) has increasingly become the standard of care for non-resectable liver tumors, but the treatment becomes less effective for larger tumors. There are few non-surgical therapeutic treatment options available as radiation therapy and chemotherapy are largely ineffective in the treatment of primary liver cancer.

#### *About ThermoDox® and the Phase III HEAT Study*

ThermoDox® is a proprietary heat-activated liposomal encapsulation of doxorubicin, an approved and frequently used oncology drug for the treatment of a wide range of cancers. In the HEAT Study, ThermoDox® is administered intravenously in combination with RFA. Localized mild hyperthermia (39.5 - 42 degrees Celsius) created by the RFA releases the entrapped doxorubicin from the liposome. This delivery technology enables high concentrations of doxorubicin to be deposited preferentially in a targeted tumor.

For primary liver cancer, ThermoDox® is being evaluated in a 600 patient global Phase III study at 76 clinical sites under an FDA Special Protocol Assessment. The study is designed to evaluate the efficacy of ThermoDox® in combination with Radio Frequency Ablation (RFA) when compared to patients who receive RFA alone as the control. The primary endpoint for the study is progression-free survival (PFS) with a secondary confirmatory endpoint of overall survival. A pre-planned, unblinded interim efficacy analysis will be performed by the study' independent Data Monitoring Committee by year end. Additional information on the Company's ThermoDox® clinical studies may be found at [www.clinicaltrials.gov](http://www.clinicaltrials.gov).

*About Celsion Corporation*

Celsion is a leading oncology company dedicated to the development and commercialization of innovative cancer drugs including tumor-targeting treatments using focused heat energy in combination with heat-activated drug delivery systems. Celsion has research, license, or commercialization agreements with leading institutions such as the National Institutes of Health, Duke University Medical Center, University of Hong Kong, the University of Pisa, and the North Shore Long Island Jewish Health System.
